

Shipyard Management encourages permanent improvement of energy efficiency by implementing energy management system according to the current legislation of the Republic of Croatia and international standard ISO 50001:2018 in repairs, newbuildings, conversion of vessels and production of all kinds of metal constructions in Shipyard Viktor Lenac d.d. – Martinšćica bb, 51000 Rijeka, Hrvatska.

Shipyard Management proclaimed vision, mission and strategy of the Shipyard, which represent the basis resulting in the following energy policy.

Shipyard Management is committed to provide availability of information and necessary resources for achieving general and special objectives and it is also committed to comply with current legislations and other requirements Shipyard assumed to observe in terms of energy usage, energy consumption and energy efficiency.

Within the defined scope of operations, Shipyard is focused on and supports procurement of energy efficient products, services and design for improvement of energy performance.

Our general objective is to reduce energy consumption considering changes in activity levels, work period and other relevant factors where Shipyard Management is especially determined to achieve awareness on compliance with this energy policy, procedures and requirements of the Energy management system where Management supports communication on suggestions for improvement of management system in all functions and at levels of organization through engagement of all employees and/or subcontractors.

Shipyard's employees are familiar with this policy and resulting objectives. Implementation of measures of this policy and realization of objectives resulting therefrom is binding for all employees. Shipyard also decided that there will be no external communication in the energy management system.

Management shall assess adequacy of the energy policy at least once a year and shall update it as necessary.
